Lital Rotter

Mechanical Engineer

litalyael980@gmail.com | 050-9278884 | linkedin.com/in/lital-rotter

PROFESSIONAL SUMMARY

Mechanical Engineer, B.Sc., Summa Cum Laude, with experience in cooling and pumping systems, energy efficiency, mechanical design and product engineering, including work with international manufacturers. Designed the heat sink and cooling fins of an electronics system in a final year project with SolarEdge. Academic foundation in heat transfer, fluid mechanics and thermodynamics.

PROFESSIONAL EXPERIENCE

Energy Domain Manager & R&D Engineer, ESE , June 2025 to Present

- Conduct energy efficiency assessments of industrial cooling and pumping systems, including on site temperature, pressure and flow measurements.
- Analyze system performance, identify energy optimization opportunities, and prepare engineering reports and recommendations for maintenance and senior management.
- Participate in R&D projects for the evaluation and piloting of new energy technologies, including collaboration with startups.
- Define technical specifications and implementation guidelines. Work with Unitronics control, monitoring and data acquisition systems, including programming.

Product Engineer, Krausz Industries , September 2024 to June 2025

- Responsible for packaging and fastener products, including packaging design, product catalog management, and resolving issues with suppliers.
- Supported the transition of products from development to production.
- Modeled mechanical products in SolidWorks, prepared manufacturing documentation and implemented engineering changes.
- Worked with international manufacturers. Used Priority ERP, PDM systems and VxElement.

Student in the Engineering Team, SolarEdge , 2022 to September 2024

- Performed strength testing, including shear and tensile tests of fasteners and packaging drop tests according to standards.
- Updated engineering drawings in SolidWorks.
- Worked with customers and international manufacturers to resolve field quality issues.

ACADEMIC FINAL YEAR PROJECT

Thermal & Mechanical Design of a PV Panel Hot Spot Monitoring System, SolarEdge and Ariel University

- Designed the mechanical components and the electronics enclosure in SolidWorks, including sealing.
- Designed a heat sink and custom cooling fins for the Raspberry Pi, which processed data from the thermal camera, with the goal of improving heat dissipation.
- Integrated thermal and mechanical requirements into the design, including temperature limits and environmental conditions.

EDUCATION

B.Sc. Mechanical Engineering and Mechatronics, Ariel University , 2020 to 2024

- **Summa Cum Laude, Highest Honors.** Awarded the Rector's Certificate of Merit for academic excellence in 2021, 2022 and 2023.
- Certified Energy Supervisor.
- Relevant coursework: Heat Transfer, Fluid Mechanics, Thermodynamics, Numerical Methods.

TECHNICAL SKILLS

Thermal, Energy & Engineering:
Cooling Systems, Pumping Systems, Energy Efficiency, Thermal Management, Thermal Measurements

Mechanical Design & CAD:
SolidWorks, SolidWorks Sheet Metal, Fusion 360, Mechanical Product Design, 3D Scanning, VxElement

Simulation & Programming: **Ansys Fluent at beginner level, MATLAB, Python at beginner level**

Systems & Tools: **Unitronics, Priority ERP, PDM**

TRAINING

- Plastic Injection Planning, Bergo Lab
- SolidWorks for Students, Engineers and Designers, Udemy
- SolidWorks Sheet Metal, Systematics

MILITARY SERVICE

- **2016 to 2017:** Observer, 636th Battalion, Jerusalem Envelope.
- **2017 to 2018:** Laboratory Technician, Clinic 8284, Ofarit Jerusalem.

LANGUAGES

Hebrew, native. English, fluent.
